Ballpoint pen series

LOREM IPSUM DOLOR

- Ballpoint pen: A ballpoint pen or a ballpoint pen is a water-based ballpoint pen. The writing principle of the ball pen is mainly to use the ball to directly contact the paper surface during writing to generate friction, so that the ball rolls in the ball seat and brings out the ink or ink in the pen core to achieve the purpose of writing.
- The pigment of the ballpoint pen ink is a dye. The ink colors are mainly blue, red and black, among which black ink is the most used.

Material and process

- Pen body material: generally divided into painting, plating, spray glue. The spray paint adopts advanced anti-scratch and wear-resistant technology, and the electroplating adopts ultrasonic cleaning technology to ensure the surface gloss and durability of the pen. The pen body is mostly steel rod, but also has aluminum rod, copper rod, and the ball pen is usually a steel rod copper fitting. (The color of plating is only gold, silver, rose gold)
- Body color: regular color black, white, gold, silver, red, rose gold, etc., can also be customized according to the Pantone color number provided by the customer.
- Pen logo: Generally divided into laser and silk screen, we will make the rendering according to the documents provided by the customer, which will be determined by the customer. Determined and then produced, such as the pen is a steel rod, the laser is silver. If the pen is a copper rod, the laser is golden. The color of the silk screen can be customized by the customer.
